### DETAILED ACTION

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

#### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 9-11,15-17 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

A broad range or limitation together with a narrow range or limitation that falls within the broad range or limitation (in the same claim) is considered indefinite, since the resulting claim does not clearly set forth the metes and bounds of the patent protection desired. See MPEP § 2173.05(c). Note the explanation given by the Board of Patent Appeals and Interferences in *Ex parte Wu*, 10 USPQ2d 2031, 2033 (Bd. Pat. App. & Inter. 1989), as to where broad language is followed by "such as" and then narrow language. The Board stated that this can render a claim indefinite by raising a question or doubt as to whether the feature introduced by such language is (a) merely exemplary of the remainder of the claim, and therefore not required, or (b) a required feature of the claims. Note also, for example, the decisions of *Ex parte Steigewald*, 131 USPQ 74 (Bd. App. 1961); *Ex parte Hall*, 83 USPQ 38 (Bd. App. 1948); and *Ex parte Hasche*, 86 USPQ 481 (Bd. App. 1949). In the present instance, claim 9-11,15-17

Art Unit: 1615

recites the broad recitation "animals", and the claim also recites "dairy cattle" which is the narrower statement of the range/limitation.

In point of fact, the specification shows only dairy animals udder & teat advantageously treated with a powder, as opposed to prior art powders to animals & people, as antiperspirants, for instance, or as Bartniks pastes, as cited, thus the inventive method is seen as alternatives to teat dips in cold weather, & not to any and all farm animal treatment.

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 9-11, 15-17 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Chlorhexidine-containing is not evident to examiner in the specification as a powder; polymeric forms of . Chlorhexidine could be in powder form, but what the specification is seen as describing is

Art Unit: 1615

Chlorhexidine absorbed into corn starch, thus this is the material , as evident in the specification as combined with zinc oxide. If . Chlorhexidine acetate is the powder, then this should be the material limited in independent claims .

Claims 9,15 stand rejected under 35 U.S.C. 103(a) as being unpatentable over Bartnik et al 5399353 in view of Modak et al 6037386.

Applicant's arguments filed 4/13/06 have been fully considered but they are not persuasive. Applicant's arguments are in essence, prior art does not show a powder consisting of chlorhexidine acetate, or equivalent chlorhexidine or chlorhexidine compound, with a powder of zinc oxide, or equivalent zinc salt, applied as a dry powder to an animal. Applicant argues Bartnik, the closest prior art, does not teach applying a powder to the teats of a cow. However, at col. 7, last line, chlorhexidine , with zinc oxide & the like, at col. 8, line 7,8, as an additional component, can be used in powder form preparations(col. 8, lines 5 & 6).

However, applicant's arguments regarding treating dairy livestock with powders of chlorhexidine acetate & the zinc powder are unobvious.
